SINCE 1971...

There's something about the spirit of the people that work at Cannondale.

It's a mindset that's fiercely competitive. Not so much with other bicycle companies or the various disciplines of the sport. But rather with an invention that, in it's simplest form, hasn't changed for more than 150 years.

Today, we live and ride in a world where millimeters and grams can make a difference. The expansion of a tube here and the machining away of a gram there can be significant in how a bike performs.

Performance at this level requires starting every project with a blank sheet of paper where standards don't exist.

Sometimes our creations might look different in order to make them perform better. We find that the term 'conventional wisdom' is not appropriate to our goals.

We like to think that our struggle with form and function, millimeters and grams can make a difference. When executed correctly, fresh bike designs can put more "butts on bikes". And that's better for everybody involved.

These are the things we fight for.

It's a good fight.

OPTIMIZED FOR

LEFTY.

The Last Word in Suspension. *So revolutionary that it still turns heads more than 10 years after it was released. The Lefty continues to gain converts and gather accolades because it is a no-holds-barred performer. It is, in fact, the last word in suspension: Stiffer and lighter than the competition, the Lefty outperforms every other fork in its class.*

HOLLOWGRAM.

Lighter. Better. Faster. Stronger.

At 570 grams, the Hollowgram Si SL could be the difference in a bunch sprint or alpine climb. It remains the lightest production crankset in the industry and boasts the best stiffness-to-weight numbers of any crank available today.

S.A.V.E.

Ride Longer. Ride Faster. Ride More. *Cannondale S.A.V.E. stays are organically shaped to function like a micro-suspension system, absorbing road vibrations without sacrificing the lateral stiffness needed for pedaling efficiency. The result is improved comfort, improved control and increased enjoyment. Road, MTB and recreational cyclists can ride longer or ride more, and multisport athletes come off the bike fresher for the run. Save yourself!*

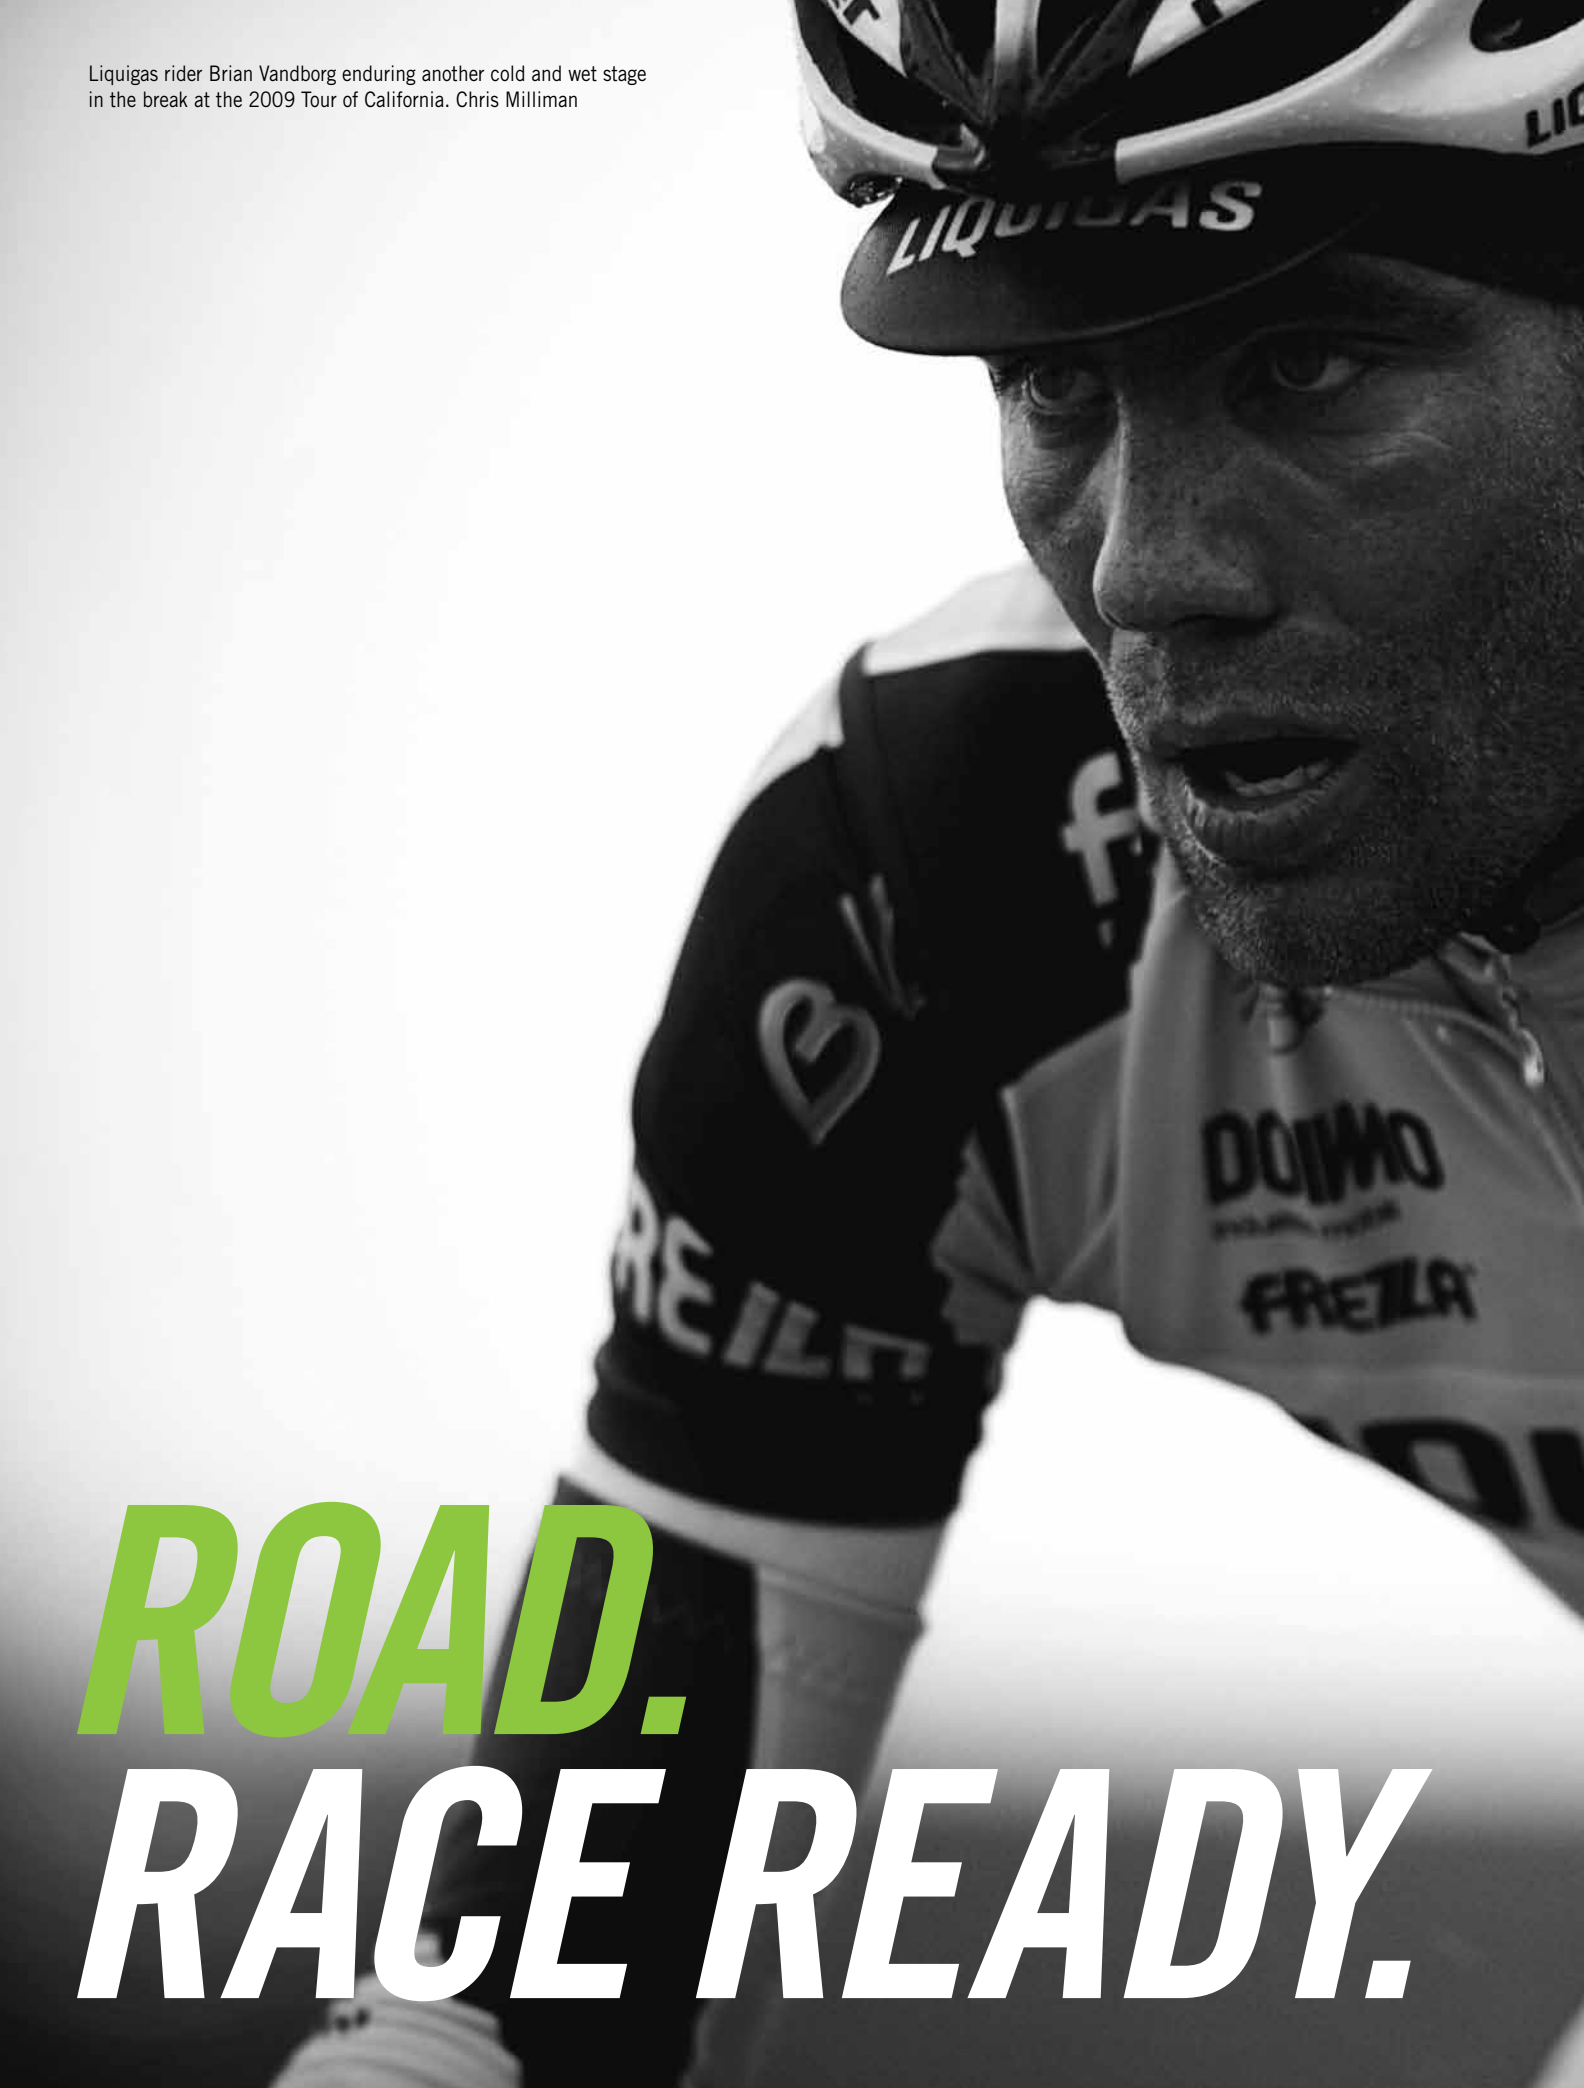

URGLASS

SYSTEM INTEGRATION
SI
CERAMIC BEARINGS
SI

BB30.

Oversized Matters. *First we revolutionized BB size for ourselves. Then we did it for the industry. Put simply, we freely released our BB30 standard to the rest of the industry so that riders everywhere could benefit from the improved torsional resistance and increased power transfer. Lighter and stiffer than other systems, the BB30 is the barometer of bottom bracket performance.*

Liquigas rider Brian Vandborg enduring another cold and wet stage in the break at the 2009 Tour of California. Chris Milliman

ROAD. RACE READY.

SUPERSIX

SUPERSIX HI-MOD ULTIMATE

Exposed Carbon (matte) (CRB)

Frame	SuperSix Carbon Hi-MOD	**Crank**	Cannondale Hollowgram SL BB30, 39/53, black	**Brakes**	Zero Gravity, black
Fork	Cannondale SuperSix Hi-MOD+, Full Carbon	**Rear Derailleur**	SRAM RED	**Saddle**	Fi'zi:k Antares with Carbon rails
Wheelset	DT Swiss RRC425F and RRC 525R	**Shifters**	SRAM RED	**Sizes**	52,54,56,58cm

A REVOLUTION HITS THE ROAD.

Pellizotti won the Tour de France KOM aboard one. The unmatched power transfer on the new SuperSix made Pelli's run possible.

1 STIFFNESS-TO-WEIGHT:
Cannondale's engineers have again shaved weight without sacrificing stiffness, making the new SuperSix an extraordinarily efficient road machine. For riders, the SuperSix wastes none of their energy.

2 POWER TRANSFER:
The SuperSix uses matching-radius overwraps on the massively oversized BB shell and chain stays. The design does away with flexy lugs and maximizes carbon contact surfaces – resulting in superior power transfer.

3 COMPLIANCE:
Some carbon frames ride like dead wood. Cannondale perfected 'lively' ride feel with alloy frames and have injected carbon frames with the same ride qualities via our proprietary layup methods. Snappy, responsive frames instantly transmit pavement conditions for improved road manners and performance.

SUPERSIX HI-MOD SUPER RECORD

Liquigas Team Replica (gloss) (LIQ)

Frame	SuperSix Carbon Hi-MOD	**Crank**	Cannondale Hollowgram SL BB30, 39/53, black	**Brakes**	Campagnolo Super Record D-Skeleton, black

Wheelset	Mavic Ksyrium Equipe	**Shifters**	SRAM Rival	**Sizes**	48,50,52,54,56,58,60,63cm

SIX CARBON

1 MONOCOQUE:
More than 100 grams lighter than the '09 version, the Six Carbon retains an ultra stiff, precisely oriented uni-directional monocoque front triangle that boosts lateral and torsional stiffness for excellent power transfer in the final sprint.

2 BB30:
The Cannondale-developed BB30 standard brings new levels of efficiency to BB shells and crank sets. The oversized design resists power loss from twisting and allows our engineers to shave weight.

3 COMPLIANCE:
The 15mm hourglass-shaped seat stays lend compliance for greater rider comfort over the long haul, but yield no energy-sapping lateral movement.

Triple Crank: FSA SL-K Light BB30 Triple, 30/39/52

Race Red (gloss) (RED)

SIX CARBON ULTEGRA COMPACT – SIX CARBON ULTEGRA TRIPLE

New Team Blue (gloss) (BLU)

CAAD9

1 ALLOY PERFORMANCE:
The legendary CAAD9 is, quite simply, the finest alloy road frame on the planet. Cannondale's quarter century of aluminum design experience means the CAAD9 is the most refined and technologically advanced alloy frame available. So good, it puts most carbon frame to shame.

2 BB30:
Now on the CAAD9! The BB30 was invented to give riders everywhere more power from every pedal revolution. Shave weight, minimize pedaling effort and ride faster. With the Hollowgram Si SL, it's the lightest crankset/BB combo in the world.

3 VERSATILITY:
As an Elite frame in Cannondale's road line, the CAAD9 has Pro-Tour geometry that's at home in continental pelotons. But it's equally suited for multi-day charity rides and remains a cult favorite when knocking elbows at the local crit race.

CAAD8

1 COMPLIANCE:
Like those stays found on our more expensive road frames, the hourglass-shaped seat stays lend compliance for greater rider comfort over the long haul, but yield no energy-sapping lateral movement.

2 GEOMETRY:
A slightly more upright riding position gives riders comfortable, predictable handling. The geometry straddles Elite and Performance ride characteristics for the best of both worlds.

3 MANUFACTURING QUALITY:
Cannondale's trademark double-pass smooth-welded technology virtually eliminates the stress risers possible on machine-welded frames and gives the frames a finished, handcrafted aesthetic.

COMPETE. COMMUTE. REPEAT.

Proven at Paris-Roubaix and Granfondos! A supremely comfortable, stylish road bike that's purpose-built for performance and comfort. From Saint-Python to Giaole, ride cobbles without pain.

1 S.A.V.E.:
The Synapse's Active Vibration Damping eliminates numbing road buzz and high frequency vibrations without any power loss.

2 GEOMETRY:
A more upright riding position gives riders comfortable, predictable handling. The result is ride-all-day handling qualities – vitally important for long-distance charity events or relaxed training days.

3 RIDE FEEL:
Rocketship-like acceleration and the comfort of S.A.V.E. stays. The Synapse has it all, matching Elite-level ride performance with the stable handling and comfort-enhancing traits every rider can love.

WEAPON OF CHOICE.

Don't just beat the competition. Demoralize them. Demolish your personal best times. Do it aboard the Slice and S.A.V.E. yourself for the run.

1 S.A.V.E.:
Transition off the bike with more energy for the run! That's the benefit of the Slice's Active Vibration Damping, which soaks up road buzz so riders don't have to. Chrissie Wellington has broken world records using the Slice, so imagine what it can do for you.

2 AERO DESIGN:
Class-leading aerodynamics achieve higher bike speeds. Our reduction of laminar drag has been confirmed by third-party wind tunnels and at Tour magazine's labs. Smooth bikes go faster.

3 LIGHTWEIGHT:
The Slice frameset is one of the absolute lightest on the planet, and has the best stiffness-to-weight ratio in the industry. Light bikes climb easier and get up to speed faster after the transition.

Chrissie Wellington successfully defends her 2008 title at Port McQuarie, Australia. Gareth Christian

SYNAPSE FLAT BAR

1 HIGH-SPEED COMMUTE:
Synapse Flat Bar bikes give riders the speed of a road bike platform with a more upright body position. Refinements to the geometry encourage stable handling and better steering precision.

2 S.A.V.E.:
From Puerta del Sol to the Brandenburg Gate, fitness bikes and fast commuters have never been more comfortable. S.A.V.E. stays absorb road faults and protect riders from the constant jarring that saps energy.

3 MANUFACTURING QUALITY:
Cannondale's trademark double-pass smooth-welded technology virtually eliminates the stress risers possible on machine-welded frames and gives the frames a finished, handcrafted aesthetic.

1 BB30:
The Cannondale-developed BB30 standard brings new levels of efficiency to BB shells and crank sets. The oversized design resists power loss from twisting and allows our engineers to shave weight.

2 PODIUM-READY:
The winningest North American team last year rode CAAD9 'crossers to victory. Spec'd by in-house former racers, these 'cross bikes have competition-ready geometry and are bred for action right out of the box.

3 COMMUTER OR COMPETITOR?
It can do both. Cannondale's 'cross frames are comfortable on the street or on course. The clearance to run fatter tires makes these 'cross bikes capable commuters, too!

RIDE TO WIN.

Lighter, stiffer, stronger, faster. Seriously. At 7530 grams, the Flash is a purebred race machine. Combined with the Lefty, it's the most efficient, lightweight hardtail frame on the World Cup scene.

1 ULTRA-EFFICIENT:
For 25 years, Cannondale has been shaping and optimizing tubing to continuously better frame performance. The Flash is no different. A radically shaped seat tube and top tube junction unifies the front triangle, giving this race-ready hardtail the stiffest frame ever.

2 LAYUP WITH PURPOSE:
No bull: Fibers want to be straight. After all, that's when they're lightest and strongest. The Flash's use of continuous-fiber technology allows carbon fiber orientation to run uninterrupted the length of the frame, maximizing torsional stiffness and minimizing weight.

3 SINGLETRACK PERFORMER:
Oversized head tube diameter stiffens the top tube to down tube junction for the best possible steering precision. The ultra-efficient frame and point-and-shoot steering of the Flash make it a natural for technical singletrack.

Innovator, adventurer, gentleman: Cannondale's Doug Dalton puts a new Lefty to the test near Park City, Utah. Doug Dalton

HEADSHOK

1 SYSTEM INTEGRATION:
Constrained by industry standards? Never! Cannondale's System Integration philosophy encourages engineers to push product to the next level. We know that you can't ride a frame, a fork, or any individual component: You ride the whole bike. So, when bolt-on off-the-shelf products are not good enough, our engineers set to work on a truly new and innovative design like the Lefty that is lighter, stronger, and out performs everything out there.

2 INVERTED DOUBLE-CLAMP DESIGN:
The head tube sees an amazing amount of stress. Forces come from the trail and get transmitted through the wheel, and forces come via the rider through the handlebar. Because of this, the Lefty's unique inverted structure puts the largest and strongest parts at this highest-stressed area of the fork – at the top and bottom of the head tube – to get optimum fore, aft, and lateral stiffness.

3 88 NEEDLE BEARING TECHNOLOGY:
At the heart of all HeadShok suspension, this single sided telescoping design relies on four strips of stainless steel needle bearings. These bearings are sandwiched between flat inner and outer races to smoothly roll through the fork's travel – instead of sliding like traditional, flexy bushing-equipped forks. The result is the Lefty's stiction-free travel, greater durability, and un-paralleled steering precision.

4 ONE PIECE INTEGRATION (OPI):
At Cannondale "less equals more." By capitalizing on 25 years of metal forming experience, our engineers are able to replace multiple parts with a single forged part. The end result is the elimination of overlapping material and hardware, which creates a lighter system without any loss in stiffness.

5 PBR W/NEW POP TOP PISTON:
Building on the success of the first-generation PBR damper, this latest version maintains the intuitive and easy to reach button-and-dial assembly but combines it with a new, blowoff-equipped platform piston. The new Pop Top piston gives riders a second performance option on the trail: With the Pop Top mode engaged, the rider will feel a firm threshold which offers greater efficiency on climbs and smoother trails.

HEADSHOK

LEFTY MAX

All-mountain forks at XC fork weights.

- 140 mm
- Featured on RZ One Forty
- On/Off platform button on PBR models controls new blowoff piston
- Solo Air spring system is light and makes set-up easy on all PBR models
- FOX RLC is full featured and coil sprung to tackle any terrain
- All-mountain specific clamps and carbon layup for outer tube give added stiffness and steering precision

LEFTY MAX	CARBON W/PBR	CARBON W/FOX RLC	W/PBR
	2.83 lbs/1284 g	3.41 lbs./ 1545 g	3.08 lbs./ 1395 g

LEFTY ULTRA

The Lefty Ultra has perfect balance of light weight and performance for Marathon and 24-hour riders.

- 120 mm
- Featured on RZ One Twenty
- On/Off platform button on PBR models controls new blowoff piston
- Solo Air spring system is light and makes set-up easy
- OPI technology on alloy outer and spindle saves weight without sacrificing steering precision

LEFTY ULTRA	W/PBR
	3.08 lbs. / 1395 g

LEFTY SPEED

A no-compromises race fork. Our competition sacrifices stiffness and performance to save weight, but the Speed has it all.

- 110 mm
- Featured on Scalpel, Flash
- DLR damper is race proven to be fast and reliable
- Solo Air spring system is light and makes set-up easy on all models
- Carbon SL model optimizes carbon leg and clamps to save weight
- OPI technology on alloy outer and spindle saves up to 180 grams over 09 versions

LEFTY SPEED	CARBON SL W/DLR	CARBON W/DLR	W/DLR
	2.56 lbs. / 1159 g	2.92 lbs. / 1325 g	3.01 lbs. / 1365 g

SUPER FATTY

The original HeadShok design still is stiffer and lighter than other 80mm forks on the market.

- 80 mm of travel
- Featured on Flash, Trail SL
- DLR damper air spring is ultra light
- Unparalleled steering precision with the Fatty blades
- On/Off lockout lever w/integrated rebound knob on DLR forks is easy-to-actuate

SUPER FATTY	W/DLR	W/DL
	2.85 lbs. / 1290 g	2.85 lbs. / 1290 g

SCALPEL

1 LIGHTEN THE LOAD:
The new magnesium link ensures the same great performance from the Zero Pivot suspension system on the Scalpel, AND lightens total frame weight by 30 grams!

2 ULTRA-EFFICIENT:
New for 2010, the Hi-MOD layup of the Scalpel Team bike optimizes lateral and torsional stiffness while shaving an astounding 100 grams from the frame weight. The winningest frame on the World Cup circuit continues to get better.

3 LATERALLY STIFF:
The seat stay bridge has been redesigned for improved lateral stiffness. More power now transfers directly to the rear wheel for better climbs, improved rear wheel tracking, and sprint-winning finishes at UCI races.

TRAIL SL

1 MANUFACTURING QUALITY:
Cannondale's trademark double-pass smooth-welded technology virtually eliminates the stress risers possible on machine-welded frames and gives the frames a finished, handcrafted aesthetic.

2 DOUBLE-BUTTED:
We know alloy frame manufacturing better than anyone else. After all, we've been at it longer than anyone else. That's why the Trail SL uses double-butted tubing for an increase in frame strength and stiffness with no weight penalty.

3 STEER STRAIGHT:
The Trail uses the OnePointFive Standard head tube. The oversized design is part of our belief in System Integration, which simultaneously lightens and stiffens the frame. Stiffer frames steer better.

RUSH

1 ULTRA-EFFICIENT:
The Hi-MOD layup and distinctive, purposeful tube shapes of the Rush's main triangle optimizes lateral and torsional stiffness while shaving frame weight. The Rush is the 110mm choice for long-distance riders.

2 PEDALING EFFICIENCY:
No other bottom bracket offers the power transfer of the Cannondale-developed BB30. Whether riders want to cross the Alps or just get across town, Cannondale's oversize bottom bracket maximizes performance.

3 SINGLE-PIVOT IS BETTER:
For long-distance riders looking for excellent suspension response and lower maintenance requirements, Cannondale's use of a single-pivot design makes sense. Marathon riders don't need to worry about link flex or losing energy to an inefficient suspension set-up.

THE ENDURANCE MASTER.

As an improved, shorter-travel version of the much-heralded RZ One Forty, the One Twenty is ideal for ultra-endurance riders. Rising-rate suspension, excellent rear wheel tracking and light weight make the One Twenty a perfect choice for the trail.

1 BACKBONE:
Borrowed from the RZ One Forty, the one-piece seat tube, BB shell and lower pivot housing on the RZ One Twenty are three-dimensionally forged for the ultimate in strength. No welds. No weak points.

2 THE DETAILS:
Sometimes small things matter most on a ride. Like the fact that the smallest size of the RZ One Twenty still can fit a water bottle in the main frame. No more reaching under the down tube in hairy conditions. Small details matter.

3 IMPROVED STANDOVER:
Using size-appropriate links lowers standover clearance on smaller sizes – ideal for female and short-statured riders. It also boosts maneuverability in tight technical terrain for unmatched trail performance.

ONE BIKE TO RULE THEM ALL.

Whether built into a flyweight all-mountain ride or a fast-and-furious 4X racing rig, the RZ One Forty wins over riders – even justifiably picky bike journalists who've heaped praise upon the RZ One Forty since its release.

1 BACKBONE:
The RZ One Forty introduced new metal forming technology to the industry. The one-piece seat tube, BB shell and lower pivot housing are three-dimensionally forged for the ultimate in strength and better power transfer. No welds. No weak points.

2 PEDALING EFFICIENCY:
Easy climbing on a bike with 140mm of suspension? They said it couldn't be done. But that was before the RZ One Forty! Perfect power transfer is achieved via the BB30 and the ISCG tabs on select models (for the innovative HammerSchmidt™ system), to make molehills out of mountains.

3 EXCELLENT TRACKING:
Nobody likes riding flexy bikes with a wandering rear wheel. That's why the swingarm on the RZ One Forty uses an oversized bridge that maximizes torsional stiffness for better control. Asymmetric chain stays also transfer pedaling forces for the ultimate power output.

MOTO

1 UPDATED LINKS:
New suspension links hone suspension response and lower the BB shell for better handling in tight technical terrain. Tackle all the trails on the best-performing long-travel bike available today.

2 HATCHET DRIVE:
The design re-orients shock forces in two directions for better force dispersion and, because it actuates from two directions, it breaks seal stiction faster for premium suspension performance.

3 STAGED TRAVEL:
The pivot location and link design creates a slightly regressive curve that provides an added climbing platform at the beginning of travel. The curve flattens in the middle, and at speed it provides a linear feel for pedaling performance that beats other all-mountain options.

BAD BOY

❶ CAFÉ RACER:
The bike that started the matte black revolution is now even more coffee house avant garde. The 2010 Stealth shaped Bad Boy brings industrial design in the world of bicycles to a whole new level with aluminium tube shaping found nowhere else than in The Cannondale design language. No wonder the Bad Boy has won the most sought after design award in the industry.

❷ THE ORIGINAL BLACK BIKE:
A decade ago, Cannondale mechanics and product managers developed a bike that could swap disc-equipped 26-inch wheels with 700c wheels. Originally, it was a race-one-day, train-the-next-day bike for our XC racers. Then we painted it matte black and sold it to the masses. Since then, black bikes have become de rigeur.

❸ CANNONDALE FATTY SI FORKS:
Cannondale specific SI forks in different versions as Rigid, HeadShok or Solo make these bikes unique. Leight weight with 1.290 gr. for the Headshok fork.

CAPO

1 LEGIT:
Impress all your hardcore bike friends: With track wheels and choice of drops or a flat bar, the 2010 Capo is a modern day iteration of the famous CAAD 5 Road Frame used in the Tour de France from our Saeco Team and Mario Chippolini. Race it in the local keirin or against the city's fleet of cabbies.

2 SIMPLICITY:
Riding a one-speed bike – whether it's fixed or freewheel – is a commentary on simplicity. It's the embrace of austerity and wholesale rejection of complexity. All of which makes Cannondale's pure alloy craftsmanship and powerfully raw tube shapes the perfect ride for the Luddites among us.

3 USA ENGINEERED:
Cannondale's engineers design each tube shape to maximize performance. On the PowerPyramid, the tube wall is thicker at the head tube junction for impact resistance, while the oversized, thinner wall diameter at the BB shell resists torsional flex.

CAPO

HOOLIGAN

1 DELTA V:
One of the strongest frame designs on the market, Cannondale's venerable Delta V frame has been resurrected for use on the Hooligan. It's ready for anything – from shenanigans on the front steps of city hall, to long commutes on pothole-filled streets.

2 PLAY BIKE POTENTIAL:
The best 'play' bike on the market is the Hooligan. It's nimble, fast and fun. But it's loaded with enough performance that riders won't suffer when they join their families on long Sunday rides along the rail trail. The adjustable stem allows riders to fine tune their fit.

3 URBAN SOLUTION:
Small wheels might just be the ultimate solution for urban environments. The 20-inch wheels are incredibly nimble to better deal with dodgy traffic, but they also reduce the overall wheelbase – which makes the Hooligan more convenient to carry up to second-story duplexes.

HOOLIGAN 3

On the loose in Italy: Cannondale's Rory Mason modified a Hooligan and decked it out in Liquigas decals to suit his purposes. Smithpics

QUICK CX

1 ALL-WEATHER COMMUTER:
With an Urban specific frame design, Cannondale Fatty fork and fast roiling, yet grippy 700c tires, the Quick CX is a dream bike on the street and in the wilderness. The flat bars give an upright seating position for dodging urban traffic and the geometry is designed for Optimal cross countryside performance.

2 GO EVERYWHERE IN STYLE:
Even people who haven't thought about bikes in years are drawn to the Quick CX: Thoughtful spec, anodized bits, and the practicality of nimble 700c wheels with front suspension, rack and fender eyelets and internal cable routing make it an go-anywhere choice.

3 COMPLETE INTEGRATION:
Cannondale's history of System Integration makes bikes lighter and improves performance. For example, HeadShok Fatty forks give 80mm of air-sprung travel at 1290 grams – and have the best stiffness-to-weight ratio in the industry. The stiction-free performance ensures you'll roll along in comfort! SI Drop-outs with integrated disc-mount.

QUICK CARBON

1 PERFORMANCE:

At EUROBIKE 2009, spectators' jaws dropped when they saw the Stealth Concept bike. The 2010 Quick Carbon brings the industrial design of that concept bike to the street, it includes performance-oriented System Integration like BB30, boasts comfort features like S.A.V.E. and has the utility features of Urban bikes – such as eyelets for rack and fenders.

2 S.A.V.E.:

Borrowed from the Synapse for the Quick, the Active Vibration Elimination gives compliance in the stays for rider comfort, but retains lateral stiffness for no power loss or pedaling inefficiency. From Navy Pier to Nashville, commuters and fitness riders alike can enjoy the comfort of S.A.V.E. stays.

3 PEDALING EFFICIENCY:

Cross bikes should have performance features, too. The Cannondale-developed BB30 shell on the Quick delivers superb power transfer and allows riders to use the Hollowgram – the lightest crank set on the market.

QUICK ULTIMATE

TESORO

❶ PRACTICAL & SPORTY:

Think of it as a flat-bar tourer. Or commuter. Or whatever you want it to be. It is bicycling's equivalent to the estate car – all-weather, a little sporty, and very functional. It is an all-conditions choice with Urban styling and Cannondale's System Integration.

❷ S.A.V.E.:

Borrowed from the Synapse, the Active Vibration Elimination gives compliance in the stays for rider comfort, but retains lateral stiffness for no power loss or pedaling inefficiencies.

❸ AN EVERYDAY RIDE:

A choice for everyday, go-anywhere cyclists, the Tesoro line is spec'ed with all the necessities you need: Lights, rack, fenders and lock. The frame even uses internally housed cables for the clean, maintenance-free look that you will appreciate on every ride, every day, every week.

TESORO 700 – TESORO 700 MIXTE

VINTAGE

1 VINTAGE STYLE:
For those who shun Lycra but love tweed and know that sometimes Old School is the best school. For them, there's Cannondale's Vintage line. The Vintage is a stylish, versatile ride – without sacrificing function to fashion. It has classic looks with the amenities, like fenders, rack and lights, that every urban rider or commuter can appreciate.

2 GEOMETRY:
The upright riding position on the Vintage gives riders comfortable, predictable handling. It makes the bike comfortable to ride and safer in busy urban traffic.

3 MANUFACTURING QUALITY:
Cannondale's trademark double-pass smooth-welded technology virtually eliminates the stress risers possible on machine-welded frames and gives the frames a finished, handcrafted aesthetic.

VINTAGE & VINTAGE MIXTE

Jet Black (BBQ)

STREET

1 VERSATILITY
The Street is maintenance free commuting at its best. A premium everyday ride with all the technicality you could ask for in a package you notice only for its elegant tubeshapes and comfortable ride.

2 RACK AND FENDER READY:
Like most of Cannondale's recreational bikes, the Street is ready for duty. Eyelets for racks, clearance for fenders, and the ability to pull a trailer all define Cannondale's recreational series of bikes.

3 HANDCRAFTED:
Not every bike can claim the handcrafted, aesthetic appeal of Cannondale's double-pass, smooth-weld technology. For riders who appreciate craftsmanship as much as function, Cannondale's Street line is a winner.

STREET SPORT NEXUS – STREET SPORT NEXUS FÉMININE

Black/Silver decals (BLK)

TANDEMS

1 INCREDIBLE PERFORMANCE:
Steel tandem frames simply can't match the power transfer of Cannondale's tandems. A redesigned boom tube, oversized pilot seat tube, PowerPyramid downtube, giant chainstays and dropouts all ensure that maximum power is applied to the rear wheel.

2 REVISED GEOMETRY:
Taller head tube and shorter top tube give the captain better control and more comfort, while a longer top tube for the stoker gives a more comfortable position.

3 DOUBLE YOUR FUN
A sidekick. A comrade. A friend. Whatever you call it, most everything in life is better with a partner in crime. That's no less true with Cannondale's tandems. Get out and ride and take someone with you. You'll love it. We promise.

MOUNTAIN TANDEM

Kymberli Fant tackling a gradual climb well ahead of the gang, northern California. Chris Milliman

FÉMININE FOR YOU.

SYNAPSE FÉMININE

1 FÉMININE BENEFITS:
The most comfortable bike in Cannondale's road line is now spec'd with bars, saddles, and the thoughtful geometry choices that give women and short-statured riders a more comfortable riding position.

2 S.A.V.E.:
Nobody wants a sore bum or numb wrists on a long ride. That's why the Synapse's Active Vibration Damping gives compliance in the stays to reduce annoying road buzz, but retains lateral stiffness for no power loss or pedaling inefficiencies.

3 GEOMETRY:
A more upright riding position gives riders comfortable, predictable handling. The result is ride-all-day handling qualities – vitally important for long-distance charity events or relaxed training days.

SYNAPSE CARBON FÉMININE 105

Magnesium White w/ Neon Spring (gloss) (WHT)

Wheelset	Shimano WHR 500A	**Shifters**	Shimano Tiagra	**Sizes**	44,48,51,54cm

FLASH FÉMININE

❶ FÉMININE BENEFITS:

The race-ready and ultra light alloy Flash is crafted from 6061-T6 aluminum. But you know what would make it even better? Sizes for the ladies! Thoughtful geometry choices and careful component selection will make the Flash a sure winner.

❷ ULTRA-EFFICIENT:

For 25 years, Cannondale has used shaped tubing to optimize frame performance. The Flash is no different. Radically shaped tubing unifies the front triangle, giving this competition-ready hardtail the stiffest, most-efficient frame ever.

❸ SINGLETRACK PERFORMER:

Oversized head tube diameter stiffens the top tube to down tube junction for the best possible steering precision. The ultra-efficient frame and point-and-shoot steering of the Flash make it a natural for technical singletrack.

F3 FÉMININE

Jet Black (matte) (BBQ)

Frame	Flash Féminine S.A.V.E. BB30	**Tires**	Hutchinson Toro 2.15" wb	**Shifters**	SRAM X-7

Wheelset	Mach1 Sub Zero w/ Shimano M525	**Derailleurs (R/F)**	SRAM X-9 / SLX	**Sizes**	P, S, M

SCALPEL FÉMININE

❶ FÉMININE BENEFITS:

With more cross-country podiums under its belt than the competition, the Scalpel is a perfect choice for women who race in the dirt. Components, geometry and paint packages are all tuned to appeal to women who race in the big ring.

❷ LATERALLY STIFF:

The seat stay bridge has been redesigned for improved lateral stiffness. More power now transfers directly to the rear wheel for better climbs, improved rear wheel tracking, and sprint-winning finishes at UCI races.

❸ PEDALING EFFICIENCY:

No other bottom bracket offers the power transfer of the Cannondale-developed BB30. Whether riders want to cross the Alps or just get across town, Cannondale's oversize bottom bracket maximizes performance.

SCALPEL FÉMININE

Lightning White (gloss) (WHT)

Frame	Scalpel Féminine Zero Pivot BB30	**Tires**	Schwalbe Racing Ralph EVO 2.1"	**Shifters**	Shimano XT

Wheelset	DT Swiss XCR 1.7	**Derailleurs (R/F)**	Shimano XT / XT	**Sizes**	P, S, M

TRAIL SL FÉMININE

❶ FÉMININE BENEFITS:
Alloy bikes remain a favorite because they are so versatile. This remains true for the women-friendly Trail SL hardtail – with narrower bars, better saddles, and revised geometry, the Trail SL is near perfect!

❷ MANUFACTURING QUALITY:
Cannondale's trademark double-pass smooth-welded technology virtually eliminates the stress risers possible on machine-welded frames and gives the frames a finished, handcrafted aesthetic.

❸ STEER STRAIGHT:
The Trail SL uses the OnePointFive Standard head tube. The oversized design is part of our belief in System Integration, and simultaneously lightens and stiffens the frame. Stiffer frames steer better.

TRAIL SL 3 FÉMININE

Lightning White (gloss) (WHT)

Frame	Trail SL Féminine S.A.V.E.	**Tires**	Hutchinson Iguana 2.0" wb	**Shifters**	Shimano Deore

RZ ONE TWENTY FÉMININE

1 FÉMININE BENEFITS:
For a bit more travel on a bike that fits, try the RZ One Twenty. For all-conditions trail riding, a general-purpose fun bike, or a marathon racer, the One Twenty is perfect for hard-core women riders.

2 IMPROVED STANDOVER:
Using size-appropriate links improves suspension performance and lowers standover clearance on the small sizes. It also gives size-specific handling for better maneuverability in tight terrain.

3 BACKBONE:
Borrowed from the RZ One Forty, the one-piece seat tube, BB shell and lower pivot housing on the One Twenty are three-dimensionally forged for the ultimate in strength. No welds. No weak points.

RZ ONE TWENTY FEMININE

Lightning White (matte) (WHT)

RZ ONE FORTY FÉMININE

1 FÉMININE BENEFITS:
For a bit more travel on a bike that fits, try the RZ One Twenty. For all-conditions trail riding, a general-purpose fun bike, or a marathon racer, the One Twenty is perfect for hard-core women riders.

2 BACKBONE:
The RZ One Forty introduced new metal forming technology to the industry. The one-piece seat tube, BB shell and lower pivot housing are three-dimensionally forged for the ultimate in strength. No welds. No weak points.

3 BETTER TRACKING:
Nobody likes riding flexy bikes. That's why the swingarm on the RZ One Forty uses an oversized bridge that maximizes torsional stiffness for better control. Asymmetric chain stays also transfer pedaling forces for exceptional power output.

Please visit cannondale.com to learn more about Cannondale's culture and the 2010 bikes! Specifications subject to change without notice. Please refer to www.cannondale.com for the most recent specifications.

NO WEIGHTS?

Don't believe everything you read. Scales differ, and marketing departments have been known to fib. The best way to compare bike weights is to head to your local bike shop. Grab two comparably spec'd and built bikes, and ask the proprietor for a scale. Hang 'em high, and see who's the lightest.

Registered Trademarks ® of the Cannondale Bicycle Corporation:
Cannondale®, the Cannondale "C®" logo, Fatty®, Lefty®, Optimo®, Rize®, Scalpel®, Slice®, Synapse®.

Trademarks™ of the Cannondale Bicycle Corporation:

⚠ WARNINGS!

Bicycling has risks of serious injury or death that cannot be completely avoided. Risk can be minimized by: Reading and following all warnings and instructions in owner's manuals, owner's manual supplements, always wearing a helmet, practice and step-by-step learning, riding in control and within your capabilities.

Catalog text and descriptions are marketing materials, not instructions or guidelines for use!

Visit http://www.cannondale.com/bikes/tech/safety for warnings, technical documents, and safety guidelines.

Warning: Reflectors are not a substitute for proper lights. It is your responsibility to equip your bicycle with all state and locally mandated lights. Riding at dawn, at dusk, at night or at other times of poor visibility without a bicycle lighting system which meets local and state laws and without reflectors is dangerous and may result in serious injury or death.

If you ride your bike before dawn or after dusk, your bicycle must be equipped with lights so that you can see the road and avoid road hazards, and so that others can see you. Traffic laws treat bicycles like any other vehicle. That means you must have a white front and a red rear light operating if you are riding after dusk. Your bike dealer can recommend a battery or generator powered lighting system appropriate to your needs.

Cannondale also strongly urges you to use a flashing light or strobe. All of us at Cannondale who ride at night or in conditions of lower visibility use flashers. They can save your life

Please note: Despite our nagging, members of the Liquigas pro road racing team (and other professional sponsored teams) may appear or race without helmets. We don't think it's a good idea, but they are experienced, professional cyclists and they know the risks. They are also adults, so we respect their right to choose. Despite the intransigence of any teams, we strongly advocate the use of helmets on every ride. Wearing a helmet is perhaps your single best defense against a major medical catastrophe while riding, so buckle up!

Warning: FreeRiding is inherently dangerous. Read FreeRide Warning at http://www.cannondale.com/bikes/tech/safety.html

** Measured size is from the center of the bottom bracket to the top of the top tube, measured along the seat tube axis.*

**The Slice seat post has two positions for mounting the saddle. A full range of angles from 73 to 78 degrees is achievable depending on the rider's preference and/or the event.*

***Stack is measured vertically from the center of the BB to the top of the head tube, reach is measured horizontally from the center of the BB to the top of the head tube.*

If you ride a 56 road frame, you should choose a size 56 Slice frame.

All sizes have 700c wheels

** Measured size is from the center of the bottom bracket to the top of the top tube, measured along the seat tube axis.*

If you ride a size 56 cm Cannondale road bike, you should choose a 54 cm Cyclocross frame. This wil give you a similar top tube length but more standover height.

** For proper fit, sizes 48-54 have a seat tube that is lowered 1 cm and a head tube that is raised 1 cm. This results in a slightly sloping top tube. The measured size is from the center of the bottom bracket to the top of the top tube along the seat tube axis.*
